LinkedIn Google Scholar

Research Interests

Machine Learning, Deep Learning, Computer Vision Edge AI, Smart Sensing Data-Centric AI, Efficient AI, Intelligent System

Education

Master of Engineering Science (Research) Graduated: July 2026
Department of Electrical Engineering, Universiti Malaya, Malaysia
Field of Research: **Artificial Intelligence**
Course: Research Methodology, 3 credits, Grade A
Thesis: *Optimization of Lightweight YOLO Model for Multiclass Object Detection on Embedded Device*

B.Sc. in Electrical and Electronics Engineering Graduated: Apr. 2022
Jashore University of Science and Technology (JUST), Bangladesh
Final Year **GPA: 3.55/4.00** | **CGPA:** 3.11/4.00 (First Class Honours)
Relevant Coursework: Computer Programming, Digital Signal Processing, Digital Image Processing, Microprocessor and Embedded Systems, Numerical Methods and Statistics in Engineering, Signals Systems.
Thesis: *Design of Solar Tracking System for Optimal Power Generation at Residential Area in Bangladesh*

English Proficiency Test Scores

IELTS: Overall-7.0 (L 7.5, S 7.5, R 7.0, W 6.0) **GRE: 298** (Q 156, V 142, AWA 3.0)

Research and Teaching Experiences

Graduate Research Assistant Nov. 2023 – Feb. 2026
Centre of Intelligent Systems for Emerging Technology (CISET), Universiti Malaya

- **Embedded Object Detection:** Designed and implemented deep learning models for object detection using natural and UAV image datasets on Jetson Nano.
- **Monocular Distance Estimation:** Developed a lightweight vehicle detection and distance estimation model using Waymo data, YOLO26n, and LiDAR-based regression.
- **PPG Stress Monitoring:** Developed a lightweight model for continuous stress monitoring using PPG signals for Raspberry Pi 3B+ and Arduino Nano BLE.
- **Medical Image Detection:** Developed attention-enhanced lightweight YOLOv8n models for pediatric wrist fracture and oral cancer detection.
- **AR Learning Application:** Contributed to the design, data collection, data analysis, implementation, and evaluation of Augmented Reality Applications Attitude Scale (ARAAS) to measure attitude toward AR of the electrical engineering students at University Malaya.

Graduate Teaching Assistant / Lab Demonstrator Oct. 2025 – Feb. 2026
LAB 2 (KIE1002), Department of Electrical Engineering, Universiti Malaya

- Students were briefed prior to laboratory sessions, closely monitored experiments, assisted with troubleshooting, and evaluated laboratory performance in **electrical and electronic measurements, circuit analysis, and instrumentation**.

Publications

1. **M. M. Haq**, A. S. M. Khairuddin, E. Hanafi, H. M. F. Noman, M. H. Junos, "*HAT-YOLO: Hybrid Attention and Transformer-Integrated Model for UAV Object Detection on Embedded Devices*," *KSII Transactions on Internet and Information Systems*, vol. 20, no. 2, pp. 920-941, 2026. *DOI: 10.3837/tiis.2026.02.014*

Conference & Poster Presentation

1. **M. M. Haq**, M. O. Faruk, A. S. B. M. Khairuddin, Effariza Hanafi, K. L. Pua, and W. M. Tilakaratne, "*Real-Time Oral Cancer Detection Using Lightweight YOLOv8n-Based Deep Learning and Computer Vision: A Pilot Study*," UMHEALTH Academic Month & Research Carnival 2025, Universiti Malaya.
2. **M.M. Haq**, "*Lightweight YOLOv8 with Attention-Enhanced Backbone for Real-Time Paediatric Wrist Fracture Detection Using Resource-Constrained Devices*," 4th International Orthopaedic Postgraduate Symposium (IOPS4), Universiti Malaya, 29 Oct. 2025. **Postgraduate Oral Presentation – Winner.**

Projects

Master's Research Projects

- **Lightweight UAV Object Detection and Embedded AI** – Developed lightweight YOLO-based models for real-time object detection in UAV imagery and evaluated their performance on GPU and resource-constrained embedded platforms.
- **Stress Detection from PPG Signals** – Developed deep-learning models for automated stress detection from photoplethysmography (PPG) signals using CNN, RNN, and transformer-based architectures.

Undergraduate Projects

- **Dual-Axis Solar Tracking System** – Designed a dual-axis solar tracking system for optimal power generation in residential applications.
- **Voice-Controlled Humanoid Robot** – Developed a microcontroller-based humanoid robot with voice-controlled movement and interactive functions.
- **Solar Scooter** – Designed a rechargeable electric solar scooter with AC and solar charging capabilities.

Technical Skills

Programming: Python, R, C, C++, MATLAB
AI/ML Packages: Numpy, PyTorch, Pandas, Scikit-learn, Matplotlib, tensorflow-keras, Seaborn, Ultralytics
Simulink Softwares: Simulink, Pspice, CST, Proteus
Hardware: Jetson Nano, Arduino, Raspberry Pi
Documentation Softwares: MS Office, Latex, Adobe Photoshop, Illustrator, Inkscape

Awards & Achievements

- **Best Presenter (Postgraduate Oral Presentation) – Winner**, 4th International Orthopaedic Postgraduate Symposium (IOPS4), Universiti Malaya, 2025.
- **Best Project Award**, Solar Scooter, Student to Startup 2.0 Campus Hunt, Jashore University of Science and Technology, 2019.

Extra-curricular Activities

- **Journal Reviewer**, *KSII Transactions on Internet and Information Systems*, 2026.
- Organizer, Seminar on **Artificial Intelligence and Machine Learning**, Jashore University of Science and Technology, 2020.
- Organizing Secretary, JUST Robo Society, 2020–2021.
